

**This picture was taken
at the Beginner's
Ceremony in Hong Kong
on October 26, 2009.
It has not been
Photoshopped!**

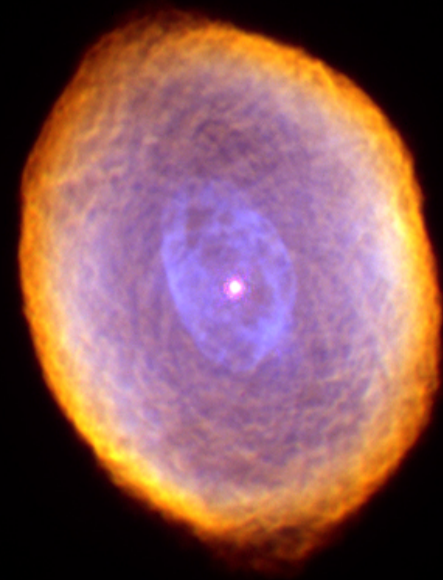

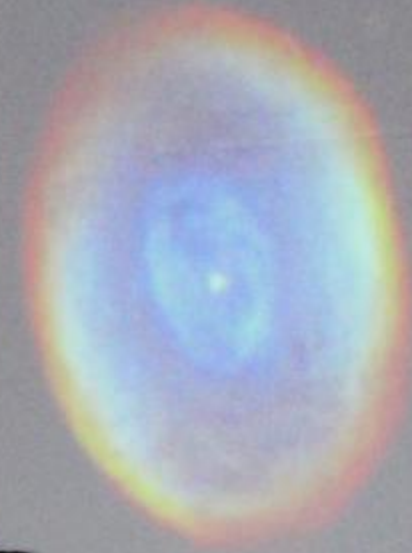

The Spirograph Nebula, Captured recently by the Hubble Telescope

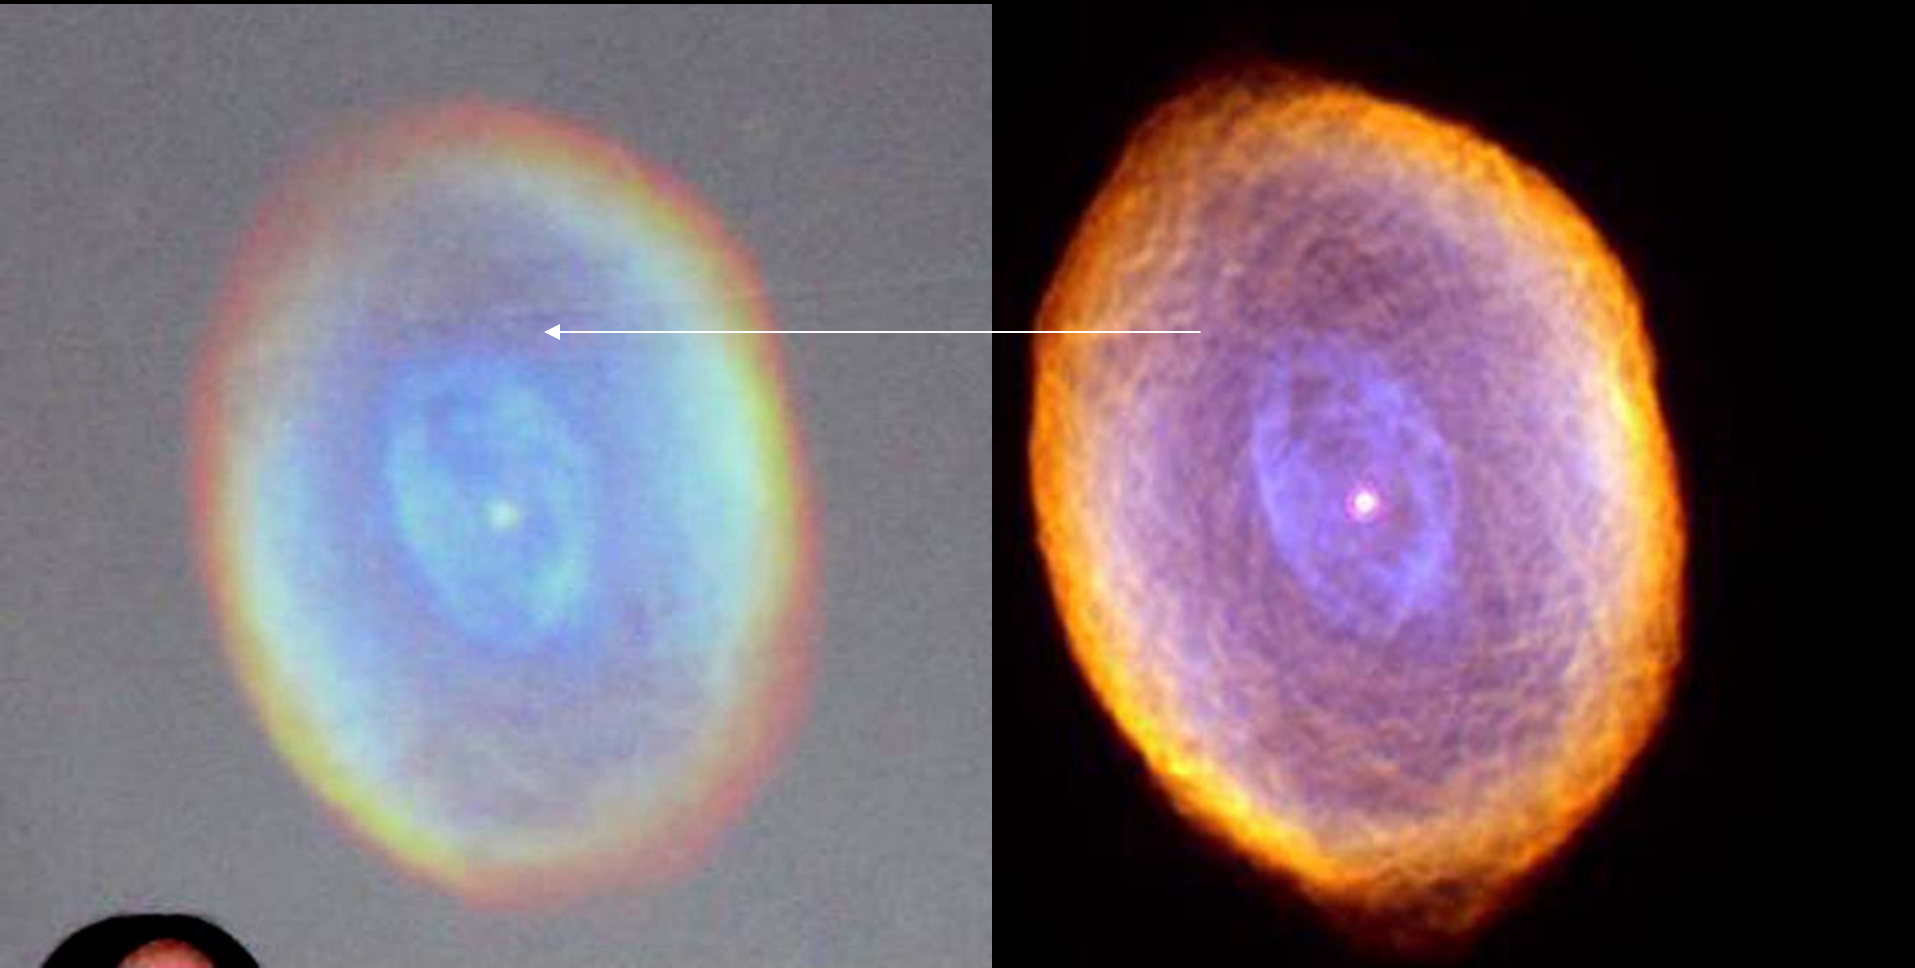

Not only was the coloring very close, but more importantly the fingerprint of the Orb was identical to the Image of IC 418 - The Spirograph Nebula, which is 2,000 light-years away from Earth!

The Future is Now!

These pictures certainly inspire contemplation on Multiple Dimensions existing simultaneously, as Ramtha always taught. Another question would be: Is Deep Space really “out there” somewhere?
